Research Intern

Institute of Complex Additive Systems Analysis

Present

TBA
- Sep 06 2016

High School Work Study

National Security Agency
- Aug 16 2017

The position required a thorough background check, federal investigation including a polygraph, as part of the application in order to obtain Top Secret security clearance. Most of the tasks that were assigned revolved around clerical work, specifically inventory and data transfer requests added with Inspector General inspection preparations.

Education

- Aug 2017

B.Sc. Physics

New Mexico Institute of Mining and Technology
- May 2022

Concentration in Astrophysics and Atmospheric Physics

Minor in Mathematics

GPA: 3.26

Present

Precipitable Water Modeling

This research is based on developing a computational model of the relationship between daily precipitable water measurements and the atmospheric temperature. The goal of this research is to develop and utilize the relationship using low cost instrumentation to deduce the amount of precipitable water from the effective temperature.
